

**Firmware Release Note** 

# Prestige 660HW-61 Standard version

Release 3.40(PE.10)C0

Date: Oct 28 ,2005

Author: Ross

# ZyXEL Prestige 660HW-61 Standard Version Release 3.40(PE.10)C0 Release Note

Date: Oct 28, 2005

# **Supported Platforms:**

ZyXEL Prestige 660HW-61

# **Versions:**

ZyNOS Version : V3.40(PE.10) | 10/28/2005 16:00:00

Bootbase Version : V1.06 | 04/01/2004 11:22:33

**Notes:** 

The Prestige 660HW-61, is 4th generation of ZyXEL ADSL product family. It is a high performance ADSL/ADSL2/ADSL2+ router for small/medium office to have Internet access and LAN-to-LAN application over the existing copper line. P660HW-61 takes advantage of much higher data rate than ADSL, speed up to 12Mbps (ADSL2) or 26Mbps (ADSL2+), greater reach, faster start-up, advanced diagnostics and better power management. This high performance ADSL router is a high integrated advanced Firewall, Bandwidth Management and IEEE 802.11g wireless features to meet the demand of high-end market.

P660HW-61 provides an embedded mini-PCI module for 802.11g Wireless LAN connectivity, four single auto-sensing, auto-detection 10/100BASE-T Ethernet ports for connection to the user's local network, and a single RJ-11/RJ-45 port for connection to ADSL/ADSL2/ADSL2+ line.

ADSL data pump version: TI AR7 04.02.01.00

#### **Features:**

#### Modifications in V 3.40(PE.10)C0 | 10/28/2005

- 1. Change to FCS version
- 2. Change default rom file

Enable wireless 4X mode; Enable Wireless gos.

#### Modifications in V 3.40(PE.10)b1 | 10/09/2005

1. [Feature Enhancement]

Employ Cone NAT, N2P support.

2. [Feature Enhancement]

From APDK5.2 change to APDK6.0, support WMM and WPA2.

3. [Feature Enhancement]

Enhancement for zero configuration. Add a new page zCfgTryAgain.html. This

page will be showed when DSL line has not up. Close web redirect once PPPOE user name and password are right

#### 4. [Feature Enhancement]

disable Webredirect, Ways to disable Zero configuration, web redirection and VC auto-hunt completely. Zero configurations should have right wording(it should show "PPP" in stead of former "PPPoE") in the URL about PPPoE/PPPoA.

5. [Feature Enhancement]

Throughput enhancement for TI platform

6. [Feature Enhancement]

Support MSN Messenger 6.2 & 7.0 passthrough without UPNP enabled.

7. [BUGFIXED]

SPRID:050916691

Symptom: Whiteboard (WAN to LAN) can't work well when UPNP is enable.

Condition: Whiteboard (WAN to LAN) can't work well in all of the following conditions.

1.OS is based on WinXP;

2.enable UPNP and "Allow users to make configuration changes through UPnP" in GUI-UPNP;

3.make sure that wan should be first to ask for whiteboard;

4.MSN6.2-MSN6.2;MSN7.0-MSN6.2;MSN6.2-MSN7.0;MSN7.0-MSN7.0.

8. [BUGFIXED]

SPRID:050916685

Symptom: if we set dhcp start ip address to a wrong range, we still can save these setting Condition: set dhcp ip address to conflict with router lan ip address, and we can save these setting in menu 3.2

9. [BUGFIXED]

SPRID:050916686

Symptom: Chariot testing fail if simultaneously select multiple Chariot script.

Condition: Topology: EndPoint1--660R--DSLAM--BRAS--Endpoint2

Selecting all 10 internet standard scripts(\netiq\chariot\script\internet\) run at the same time for a long continuous time, error with the number

0245 in Chariot

will occur and it will stop the test.

10. [BUGFIXED]

SPRID:050916687

Symptom: While WAN encapsulation is set to ENET ENCAP and dynamic IP address is used, if WAN IP

is changed, NAT session will not be reset, it will cause internet access fail.

Condition: (1)Set DUT WAN encapsultion to ENET ENCAP and dynamic IP address, after get IP address from DHCP server on WAN side, internet access can be successful.

(2)Edit the static DHCP pool of DHCP server on WAN side to allocate another IP address to DUT, and pull out ADSL line for a moment and insert it to ensure IP re-allocation.

(3) After get new IP, internet access will be fail.

#### 11. [BUGFIXED]

SPRID:050916688

Symptom: The "Connection testing" page will not change to "Connection testing Fail" page If there are no correct PVC in hunting table

Condition: If there are no correct PVC in hunting table then getHuntState()

function never return AUTO HUNT FAIL.

#### 12. [BUGFIXED]

SPRID:050916690

Symptom: If wireless LAN card is removed from P660HW-6x board, rom-t file get from device will be disorder

Condition: Remove wireless LAN card from device, then get rom-t, title and content will not

match for some items.

#### 13. [BUGFIXED]

SPRID:050916692

Symptom:In GUI, The WAN Backup functions need at least one none-zero Check WAN IP

Condition: ICMP mode this is right, but in DSL Link mode this is wrong.

#### 14. [BUGFIXED]

SPRID:050916696

Symptom: lan can't ping wan when change encapsulation

Condition: 1.lan ping wan 192.168.8.2 continusly.

2.In SMT Menu4, change encapsulation to PPPoE, lan can ping wan.

3.change encapsulation to ENETCAP or RFC1483,lan PC can't ping wan.

#### 15. [BUGFIXED]

SPRID:050916708

Symptom: Traffic redirect work have problem.

Condition: Step1 Use ENEP ENCAP, in DUT and device in menu 3.2 turn off RIP

Step2 In DUT menu2.1 set backup gateway is 192.168.1.5 and in device 3.2 LAN ip set 192.168.1.5

Step3 from LAN pc ping wan pc 192.168.8.11 -t (same subnet as wan ip) it is ok ,then pull off DUT wan

line, the traffic go out from device, but when plug into the DUT wan line, then the traffic can

not go out, pc reboot is ok but use ENET ENCAP ping outside ip such as 202.96.209.5 is ok, and

use PPPOE ping inside ip such as 192.168.8.1 is also ok)

#### 16. [BUGFIXED]

SPRID:050916710

Symptom: If one WLAN client connect to device using WPA-PSK, then change the mode

from WPA-PSK to WPA. Device will exception.

Condition: If one WLAN client connect to device using WPA-PSK, then change the mode

from WPA-PSK to WPA. Device will exception.

#### 17. [BUGFIXED]

SPRID:050916711

Symptom: If turn on the WLAN WPA-PSK mode, then the second PPPoE connection will not work.

Condition: 1. Set a PPPOE connection in remote node 2.

- 2. The PPPOE will up.
- 3. Turn on WLAN WPA-PSK then the PPPOE connection will down.

# 18. [BUGFIXED]

SPRID:050916712

Symptom: If using MultiBoot V2 and update all files (bootbase, rom and ras)

,it should be no problem to support different size bootbase/rom, but occurs fail. Condition: upload all files,if bootbase/rom file size is different from old f/w, it always occurs fail,

RAS file can't write to flash.

# 19. [BUGFIXED]

SPRID:050916713

Symptom: When DUT use static IP and set DNS server address in

GUI->wizard, DUT won't resolve domain name successfully until reboot

Condition:Step1 Go to GUI, configure DUT use static IP and set DNS server, then go to Maintenance->Diagnostic, try to resolve domain name, but failed

Step2 Reboot DUT, it works fine

Step3 This many cause TMSS/AV/CAC/DDNS functions doesn't work for

these

functions need DUT resolve domain name

#### 20. [BUGFIXED]

SPRID:050916714

Symptom: PPPoA idle time issue

Condition 1: 1. PPPoA and LAN PC ping WAN PC continuously

2. Reboot device, it can not connection to the remote node

Condition2: 1. PPPoA and choose nail-up yes

- 2. in SMT-4 or SMT-11 change between two right accounts ,device can not connect to remote node
- 21. Change datapump to 4.2.1.0
- 22. [BUGFIXED]

SPRID: 051008870

Symptom: PPPoE LED can't lighting when use PPPoA Encapsulation sync up.

Condition: Use PPPoA Encapsulation to sync up.

Modifications in V 3.40(PE.9)C0 | 5/13/2005

1 change to FCS

Modifications in V 3.40(PE.9)b3 | 5/13/2005

1[BUG FIXED]

Wireless IOP issue.

Modifications in V 3.40(PE.9)b2| 4/28/2005

1[Feature Enhancement]

When you use reset button to start OTIST, it also can general WPA-PSK key 2[BUGFIXED]

Symptom: After disable SIP ALG, MBM can't work for VOIP traffic.

Condition: (1) disable SIP ALG via C/I command,

(2) Set a rule in MBM for SIP application

(3)use a ATA to dial to another SIP client via SIP proxy, the traffic can't managed by MBM.

3[BUGFIXED]

SPRID:050419922

Symptom: then redirect to the page of Test Frame ceaselessly

#### Condition:

When popup the page of change username and password in zero configurations, input the inaccurate username and password,

# Modifications in V 3.40(PE.9)b1| 4/11/2005

1Support ADSL 2+ by TI modem code 3.2.6

2 [Feature Update]

add mutiboot firmware upgrade feature

3 [Feature Enhancement]

Add SIP ALG enable /disable in eWC(by default disable)

4 [Feature Enhancement]

In GUI ,add a checkbox to control wireless g+ (by default enable)

5[Feature Enhancement]

Diffserv in MBM.

6 [Feature Enhancement]

MBM mapping to ATM queque

4.5.6.7-> ATM high queue

0.1.2.3->ATM low queue

7[Feature Enhacement]

Add a drop list for user to choose "802.11g only" "802.11b only" "mixed"

8 [Feature Enhacement]

Pop-up a warning message" your pass word username is wrong please check", if user enter the wrong id and password when doing zeroconfig

9 change default MAC to 001349000001

10. [BUG FIXED]

TE report device will reboot about 3%-7% when change wireless config.

11[BUGFIXED]

Symptom: it should show test html and popup a success html or change username or password html. But it show nothing else login GUI.

Condition: when zero configure is enable.

12. [BUG FIXED]

Symptom: device will crash

Condition: we ftp to device and then change to http in IE browser

13 [BUG FIXED]

Symptom: it will show some error message, when device boot up Condition: when F/W load to a device without wireless card.

14[BUG FIXED]

Symptom: wireless can not connect to device with WEB 256-bits

Condition: N/A 15. [BUG FIXED]

Symptom: they find the first hop and the second hop is the same one

Condition: the PC behind device tracert router

16. [BUG FIXED] SPRID: 050107337

Symptom: in eWC NAT can not work correctly if I change the Server Mapping Set.

Condition:

Step1: in eWC =>Advanced Setup=>NAT, choose Full Feature and Edit the Rule 1;

Step2: choose the Type as Server mode, and set the Globle IP as the Wan ip of the DUT;

Step3: Server Mapping Set choose 2, and Edit Details, and add the Port 2121 forward to the LAN PC "10.0.0.2";

Step3: using an PC in the Wan to access the ftp(port 2121) server on the LAN PC. This must be successful;

Step4: then choose the Server Mapping Set 3, and Edit Details to add the Port 23 forward to the LAN PC. then Apply.

ftp from the WAN to the LAN also can successful, but telnet from WAN to LAN can not work.

Then reboot the DUT, the Server Mapping Set 3 can work, but the details shows the error information.

# 17. [Bug Fixed]

SPRID: 041028829

Symptom: You can not modify firewall rule, Nat - address mapping rule does not show in the approciate / exact colum

Condition: if using other web browsers like Mozilla 1.7.5.

#### 18. [BUG FIXED]

Symptom: the device will crash

Condition: when vchunt is active and delete menu 4

#### 19. [Feature update]

Recovery 802.11 mode changing command. This command can't be saved into romfile same as 5.0.7.

#### 20. BUG FIXED]

Symptom: Customer reported if a link request is given in IE can hang/reboot the ZyXEL-device.

Condition:http://192.168.1.1/Forms/rpAuth\_1?ZyXEL%20ZyWALL%20Series <script>t op.location.pathname=%20""</script>

#### 21.[BUG FIXED]

Symptom: using wordpad edit the rom-t file, the PPPoE password will be changed unexpected.

Condition: (1)In SMT menu4, set encapsulation to PPPoE mode and make sure the DUT can dial up.

(2) Get rom-t and use wordpad to edit it, change the sysname to "hehe"

and save.

(3) upload the edited file to the DUT, and the DUT can't dial up PPPoE password is changed to correct one.(use notepad and UltraEdit have no problem) 22 [BUG FIXED]

CDDID. 041990EGG

SPRID:041230566

Symptom: The "Back" button in LAN Setup can't work correct.

Condition: Step1. In GUI/Advanced Setup/LAN/LAN Setup, change some settings.

Step2. Click "Back" button, the DUT can save it successfully.

# 23[BUG FIXED]

Symptom: secondary DNS server doesn't work

Condition: connect DUT to LAN port of ZyWALL via IES, the wan port of ZyWALL is connected to internet; DUT gets IP address and DNS server from ZyWALL's DHCP server; when primary DNS server is unreachable, secondary DNS server doesn't work either.

# 24[BUG FIXED]

Symptom: When we get rom-t from LAN side by FTP, and modified it, then put rom-t, the device won't accept the new rom-t. (Just only use ultraedit modify rom-t, the DUT can accept it, but while use other utilities--DOS

Edit/Word/Notepad/WordPad modify the rom-t, the DUT can not accept it.)

Condition: N/A

#### 25[BUG FIXED]

Symptom: TFTP Firmware upload failure

Condition: In menu 24.11, leave the telnet server port default, upload firmware using tftp from lan side pc, it always fails; but if telnet server port is changed to 23, the function works well

# 26[BUG FIXED]

SPRID: 041224286

Symptom: SMT&eWC standard show is different

Condition: In menu 24.2.1, show Standard: Multi-Mode, but in eWC

Maintenance->System Status, Standard : ADSL\_G.dmt

27[BUGFIXED]

Symptom: it failed to login eWC when input 31 characters

Condition: When set 31 characters password on eWC,DUT will accept it

28[BUGFIXED]

SPRID:050329394, 050307379

Symptom: When 2 PCs visit eWC of DUT, the priority have some problem

Condition: Step1 The first PC visit the eWC of DUT, and keep login status

Step2 Then the second PC temp to access the eWC of DUT, and show the page of password entry Step3 Clicking login make the first PC logout automatically, although the second PC also can not login eWC

29[BUGFIXED]

Symptom: After disable SIP ALG, MBM can't work for VOIP traffic.

Condition: (1) disable SIP ALG via C/I command,

(2) Set a rule in MBM for SIP application

(3) use a ATA to dial to another SIP client via SIP proxy, the traffic can't managed by MBM.

#### 30[BUGFIXED]

SPRID: 050310549

symptom: we can not set device ip 0.0.0.0 in SMT ,but we can set it in eWC

condition: N/A

31 ADSL CI command format changes

32 [Feature Change]

We can not delete menu 4.

33[BUGFIXED]

Symptom: Wireless hang-up eMule throught WLAN

Condition: N/A 34[BUG FIXED]

Symptom: Special URL will cause system crash.

Condition: Form LAN site, enter

http://192.168.1.1/Forms/rpAuth\_1?ZyXEL%20ZyWALL%20Seriesscript>top.locat

ion.pathname=%20""</script> on browser, the device

will crash.

35 [BUG FIXED] (Bridge Performance)

Symptom: Bridge performance is poor.

Solution: Remove unnecessary memory movement in bpdu handling() function.

#### 36 [FEATURE ENHANCEMENT] (MULTICAST)

Symptom: While injecting multicast traffic from WAN to LAN in bridge mode, CPU loading is heavier than injecting unicast traffic.

#### 37 [FEATURE CHANGE]

Change CI command" wlan chgmode" make it can show 802.11 mode. And save to romfile.

38[BUG FIXED]

SPRID:050301058, 050310508

Symptom: In smt21.1 IP filter, IP=\*.\*.\*, mask=255.255.255.0, it can save...

the correct mask is 255.255.255.255. or IP=\*.\*.\*.0, mask=255.255.255.0

Condition: N/A 39[BUG FIXED]

SPRID: 050329394, 050316845

Symptom: In GUI wireless LAN page, if click passphrase button, make checkbox of Enable Wireless g+ inactive automatically.

Condition: Step1: In GUI wireless LAN page, input passphrase key and click "Generate" button.

Step2: The Checkbox of Enable Wireless g+ change from active to inactive automatically

#### Modifications in V 3.40(PE.8)C0| 12/23/2004

#### 1 change to FCS

# Modifications in V 3.40(PE.8)b2| 12/17/2004

# 1. [BUG FIXED]

Symptom: When the PC is being connected to DUT through wireless, reboot system, the DUT will crash.

Condition: Step1: PC(install SP2) is being connected to DUT through wireless.

Step2: At this time, reboot system

Step3: DUT will crash.

#### 2. [BUG FIXED]

Symptom: The "Back" button in Wireless-MAC filter can't work correct.

Condition: 1.in GUI, Advanced Setup-Wireless LAN-MAC Filter, change some setting 2.click Back button, the DUT can save it successfully.

#### 3. [BUG FIXED]

Symptom:

our WLAN device should disallow the client with MAC "00:00:00:00:00:00" when user define only allowed MAC (ex. only "01:02:03:04:05:06" can access) via MAC filter Condition:

Take one B220 for example, its MAC is "00:A0:C5:43:FD:C5".

- 1. Add one allowed MAC filter to "01:02:03:04:05:06" on device via SMT menu 3.5.
- 2. The B220 cannot access to the device because it only allow MAC "01:02:03:04:05:06" to access.
  - 3. Modify B220's MAC to "00:00:00:00:00:00".
  - 4. Then you find B220 can access device.

The WLAN client is possible to change its MAC address to "00:00:00:00:00:00".

Customer hope our devices should not allow the MAC like 00:00:00:00:00:00 by default.

#### 4. [BUG FIXED]

Symptom: anyip can't inactive in eWC immediately

Condition: step1 in eWC active anyip it can work

step2 when inactive anyip it can still work but in SMT don't have problem

# 5. [Feature Enhancement]

support wlan auto security key lenghth 0-8.

Change name to OTIST

Add help page.

#### 6. [BUG FIXED]

Symptom: IP source address become zero in WAN side.

Condition: IP source address is translated to zero by NAT, if

destination IP address is multicast group.

#### 7 [BUG FIXED]

Symptom: The natSetSessionPerHostForIface() causes excetion

Condition: due to the NULL pointer access. The st\_p will become NULL in some case.

#### 8 [BUG FIXED]

Symptom: vc hunt can not alloc mbuf again when vc hunt table is more than 8

Condition: N/A

9 [BUGFIXED]

Symptom: The WLAN stations can't access the network anymore.

Condtion: After config the Bandwidth management from Wizard.Just leave the default

setting.

10 [BUGFIXED]

Symptom: ping can not continue

Condition: if you set enet encap, and then ping a ip to wan, and then pull off wan, pull on it again.

11 change default romfile.

Change Wireless ESSID to ZyXEL

# Modifications in V 3.40(PE.8)b1| 12/03/2004

# 1 [BUG FIXED]

Symptom: Configure DNS server in SMT 3.2, it can take effect only after reboot the device.

Condition: Reset default romfile, Configure DNS server in menu 3.2 and save, then do "ip ping www.hinet.net", it can not work. But it will be OK after we reboot the device.

#### 2 [BUG FIXED]

Symptom: PPPoE cannot up when exchange "forced down" to "forced on" or "Enable dial-on damand".

Condition: In menul 1 nailed-up set "yes", when action exchange from "forced down" to "forced on" or to "enable dial-on demand" in menu 26, PPPoE can not link up unless you reboot the device.

#### 3 [BUG FIXED]

Symptom& Condition: When we enable "ping traffic is blocked from the WAN" function that it will also block the ping traffic from LAN->WAN

## 4 [BUG FIXED]

Symptom: ZyXEL Prestige Router Discloses Portions of Memory Contents to Remote Users .

Condition: When send icmp packet with less data than normal, remote interface pad with data to complete the frame memory contents.

#### 5 [BUG FIXED]

Symptom: In eWC If we do ping function from DOS mode then change Encapsulation to PPPoA or PPPoE that you can see the connection can't connect.

Condition: N/A

# 6 [BUG FIXED]

Symptom and Condition: the bonk attack will cause the device exception.

#### 7 [BUG FIXED]

Symptom: WE delete menu4 the system do reboot while VC hunt function enable, system reboot.

Condition: Delete SMT>> menu 4, then configure menu11, when connecting to DSLAM with VC hunt function enable, system will reboot.

#### 8. [BUG FIXED]

Symptom: The SIP ALG has some problem, some fields in SIP message do not translated by ALG.

Condition:N/A

#### 9. [BUG FIXED]

Symptom: CPU loading will reach to 100% easily with multiple PVCs in bridge mode. Condition: Under heavy downstream traffic with multiple PVCs in bridge mode.

#### 10. [BUG FIXED]

Symptom: the Content filter function can not work

Condition: if we key in capital letter. Such as "yahoo" is keyed as "Yahoo""

#### 11. [BUG FIXED]

Symptom: Traffic redirect can't work properly

Condition: In Dsl link mode when We set Enet encap mode.

# 12. [BUG FIXED]

Symptom: In smt 3 2, when we change nothing but it still save to romfile.

Condition: we change nothing in smt menu 3-2

# 13. [BUG FIXED]

Symptom: Ippr will not be active.

Condition: we have set IPPR rule in menu 25 and apply it in menu 3-2, and then reboot device.

#### 14. [BUG FIXED]

Symptom: PPPoE Pass through under Wireless function can not work.

Condition: N/A

# 15. [BUG FIXED]

Symptom: Sometime the status keep in N/A and can't dial again in PPPoA or PPPoE mode

Condition: while we changed PPPoA or PPPoE setting several times like statin IP <-> Dynamic IP , Idle time out <-> Nailed , VC<-> LLC . --> The device must reboot just can work again

#### 16[BUG FIXED]

Symptom: device will crash

Condition: if PPPOE server use Password Authentication Protocol and then our device will receive a packet PAP\_ACK or PAP\_NAK which data field is NULL

#### 17[BUG FIXED]

Symptom: PPPOE pass-through work not properly

Condition: When we set PPPoE pass-through in Menu 11.8, the LAN side PC can dymanic get the IP address, but can not get reply from ping the LAN IP address 18[BUG FIXED]

Symptom: user can access some html page without user name and password

Condition:N/A 19[BUG FIXED]

Symptom: Device will Crash

Condition: In smt ,ip ping and Ctrl+c repeat quickly

# 20[BUG FIXED]

symptom: In eWC, config a server when select NAT Full Feature. the server set in smt and the one in eWC are different.

Condition: condition1

step 1: In eWC, Advanced Setup--->NAT--->Full Feature--->Edit Details.

step 2: Click one of the rules.

step 3: Select "Type" as Server, input the Globe IP and select a Server Mapping Set (2~10) such as 4.

step 4: Click "Edit Details" into the Server Set, config and save.

step 5: Go to SMT---> menu 15.2, we will find Server Set 4 has no information we configged in eWC, the information was stored in Server Set 1 which is special for SUA.

condition2

step 1: In eWC, Advanced Setup--->NAT--->Full Feature--->Edit Details.

step 2: Click one of the rules.

step 3: Select "Type" as Server, input the Globe IP and select a Server Mapping Set  $(2\sim10)$  such as 4.

step 4: Click "Apply" to save it.

step 5: Again enter the rule, click "Edit Details" into the Server Set, config and save.

step 6: Go to SMT---> menu 15.2, we will find Server Set 4 has no information we configged in eWC, the information was stored in Server Set 5 which was not configged in eWC ever.

21[BUG FIXED]

symptom: the old routing entry is still exsit.

Condition: if we set a staic ip then routing table will add one, but when we change this static ip, we found the old routing entry is still exsit.

22. [Feature Enhancement]

**IP Policy Router** 

23. [Feature Enhancement]

Up grade TI WLAN Driver to APDK 5.2.2.22 and Accommodate 4x Mode

24. [Feature Enhancement]

Triple Play-Port Base Policy

25. [Feature Enhancement]

Support wlan auto security

26. [Feature Enhancement]

Support pass phrase.

Modifications in V 3.40(PE.7)C0| 09/29/2004

1 Change to FCS.

Modifications in V 3.40(PE.7)b3| 09/20/2004

1[BUG FIXED]

Symptom: Index of menul Domain Name display error: (2) the symbol of ',' can not work.

Conditon: N/A 2[BUG FIXED]

Symptom:QoS criteria violation. Do not comply with the rule: Priority(CBR) > Priority(VBR) > Priority(UBR)

Condition:N/A 3[BUG FIXED]

Symptom: Bug fixed incompletely. eWC NAT/ full feature/ edit details needn't apply but save successfully.

Conditon: N/A 4[BUG FIXED]

Symptom: The router incorrectly leasing static DHCP address to the wrong computers.

Condition:

- 1. Go to Advanced Setup>LAN>Static DHCP and configure the first rule with the MAC address of workstation 1 and the IP Address 192.168.1.33.
- 2. Attach workstation 2 to the router. It will get the 192.168.1.33 address.
- 3. Attach workstation 1 to the router. It will fail to get an IP address from the router.

5[BUG FIXED]

Symptom: Wan Backup Help message window is wrong.

Condition: N/A 6[BUG FIXED]

 $Symptom: There \ is \ a \ CI \ command \ set \ "wan \ adsl \ errorsecond \ xxx" \ doesn't \ work \ in \ TI$ 

platform.

Condition: N/A 7[BUG FIXED]

Symptom: Menu 15.1 the info "Enter Menu selection number" is showed duplicate.

Condition: N/A 8[BUG FIXED]

Symptom: eWC will hang when UPNP feature of our device is enabled.

Condition:(1) install windows xp service packet 2 in PC

(2)enable firewall of windows xp and also enable UPNP framework pass through or disable firewall of windows XP.

- (3) login in P660HW via eWC and enable UPNP, eWC will not be able to access.
- (4)the bug doesn't occur every time, but most time it will occur.

9[BUG FIXED]

Symptom: Use CI command "wlan association" to show association list, it will cause

system reboot.

Condition: When 3 stations connect to AP and users use CI command "wlan association" to show association list, it will cause system reboot.

10[BUG FIXED]

Symptom: When multiple stations connected to AP, once the previous one leave, the other stations also disappeared.

Condition: 1.Use Web to show association list.

2. When station disconnect the association, the system will not update the list.

3. When one station disconnect and another join, the association list will show error.

11[BUGFIXED]

Symptom: Wlan will receive the same multicast packet twice from PVC.

Condition: N/A

12 [ENHANCEMENT]

Remove CI command "wan is ","wan oos";

Modifications in V 3.40(PE.7)b2| 09/03/2004

1[BUG FIXED]

Symptom: config new time "12:22:22", click apply button, then the time show "11:22:22". It reduce one hour.

Condition: Time, Synchronize system clock with Time Server.

2[BUG FIXED]

Symptom: Advanced Setup >> NAT Edit Address Mapping Rule, click "Edit Details".information will be save. eWC/Advanced Setup >> NAT Edit Address Mapping Rule, click "Edit Details". information will be saved.

Condition: Step 1: To eWC/Advance setup/NAT

Step 2 : Click "Edit Details" but doesn't press "Apply" button

Step 3: The to other items like "LAN"

STep 4: Then to "NAT" again that you can see the setting have been save but we don't press "Apply' button.

3[BUG FIXED]

Symptom: WE delete menu3 the system do reboot while VC hunt function enable , System reboot.

Condition: Step (1) Delete SMT>> Menu 4. (2) Config Menu11. (3) Connect to DSLAM. Reference: reboot info.

#### 4[BUG FIXED]

Symptom: device will reboot.

Condition: login via eWC GUI with long password (about more than 50 characters).

5[BUG FIXED]

Symptom: "Index of menu1 Domain Name display error: 1. it should be " " A-Z" " instead of " " A-z" " . 2. and the symbol of ' , ' cannot work."

Condition: Index of menul Domain Name display

6[BUG FIXED]

Symptom: Exception occur while End ip smaller then Start ip in SMT menu , save it DUT will reboot .

Condition: At NAT full feature use many to one or many to many. set End IP smaller than start IP save it in SMT menu. Then DUT exception occur. Ex: Start IP set to 192.168.1.33.

End IP set to 192.168.1.5

7[BUG FIXED]

Symptom: We delete Menu4 the mode change to Multi mode while default set to G.DMT ot other.

Condition: We delete Menu4 the mode change to Multi mode while default set to G.DMT ot other.

8[BUG FIXED]

Symptom: Device will hang

Condition: when change NAT configuration in SMT menu 4, when performing change from SUA to Full feature if press "Enter" fast.

9 [BUG FIXED]

Symptom: then PPPoE could link successfully but PPPoE Pass-through is failed.

Condition: In eWC wan set up, select the PPPoE mode and enable PPPoE pass-through. 10[BUG FIXED]

Symptom: Can't establish PPPoE connection after PPPoE server reboot.

Condition: When router receive OAM AIS packets, PPPoE will not be triggered again

11[BUG FIXED]

Symptom: The router discloses portions of memory contents to remote users.

Condition: When send icmp packet with less data than normal, remote interface pad with data to complete the frame memory contents.

12[Enhancement]

Assign staitic DHCP by MAC

# Modifications in V 3.40(PE.7)b1| 08/19/2004

1 [BUG FIXED]

Symptom: Two PVCs will work in improper manner.

Condition: After two PVCs are established, change one VPI/VCI in DSLAM side.

2 [BUG FIXED]

Symptom: DNS will resolve www.123.com as 0.123.0.0.

Condition: When issue "ip ping www.123.com", the domain name will be resolved as 0.123.0.0.

#### Modifications in V 3.40(PE.6)C0| 08/12/2004

1 chang to FCS

# Modifications in V 3.40(PE.6)b2| 08/06/2004

1 [BUG FIXED]

Symptom: MBM wizard link to blank screen inGUI Condition: MBM wizard link to blank screen inGUI

2[BUG FIXED]

Symptom: Http can not trigger PVC, and go to zeroconfig GUI

Condition: set one remote note.

3 [BUG FIXED]

Symptom: system exception

Condition: device run MBM test and refresh MBM monitor

# Modifications in V 3.40(PE.6)b1| 08/02/2004

1. [Enhancement]

Add Media bandwidth management.

#### Modifications in V 3.40(PE.5)C0| 07/16/2004

1. Change to FCS version.

# Modifications in V 3.40(PE.5)b3| 07/15/2004

1. Change xDSL GUI to completely solve login security problem.

#### Modifications in V 3.40(PE.5)b2| 07/12/2004

1. [Enhancement]

Support IPv6 and AX.25 packet format in firewall available service.

#### 2. [Enhancement]

SPTGEN support for 8 PVC, WLAN Enable/Disable, and WPA, 802.1x

#### 3. [Enhancement]

CI command to enable/disable SIP ALG

#### 4. [BUG FIXED]

Symptom: Configure customer port in firewall will cause exception.

Condition: Add, edit or delete a customer port or a range of customer ports will cause system reboot.

#### 5. [BUG FIXED]

Symptom: content filter sometimes can not work fine when using search engine

Condition: 1. Setting content filter restricte keyword and enable keyword blocking on eWC.

- 2. To setting content filter schedule on eWC.
- 3. Using seach engine like "google" to search keyword.
- 4. Sometimes could link restricted keyword's website.

#### 6. [BUG FIXED]

Symptom: Remove SMT4 ISP node, and doing VC auto-hunt, system will get exception

#### 7. [BUG FIXED]

Symptom: Java script error when configuring zero-configuration on WEB.

#### 8. [BUG FIXED]

Symptom: Traffic redirect function cannot work.

Condition: When used as the mean of dial backup, Traffic Redirect won't work when ADSL link fails.

#### 9. [BUG FIXED]

Symptom: SMT sometimes would show wrong noise margin value.

Condition: 1. Using CI command to see DSL noise margin after ADSL link-up.

2. Sometimes would show wrong value when noise margin small than zero.

#### 10. [BUG FIXED]

Symptom: If PC is with windows XP, the AnyIP feature sometimes doesn't work

Condition: Only happens on Windows XP PC

#### 11. [BUG FIXED]

Symptom: xDSL GUI has login security problem.

#### 12. [BUG FIXED]

Symptom: Fix bug that the selection data of radio button can be saved when Apply button is done.

#### 13. [BUG FIXED]

Symptom: ROM-D cannot work.

# Modifications in V 3.40(PE.5)b1| 06/25/2004

# 1. [BUG FIXED]

Symptom: Wireless WEP key should not treat character as HEX value on eWC.

Condition: 1. Into Wireless LAN -> Wireless on eWC and setting WEP Encryption is 64-bit WEP.

- 2. To input "0123456789" on key1 then to press apply button.
- 3. The eWC can not display any error message.
- 4. The 128 and 256 bit WEP have the same bug.

#### 2. [BUG FIXED]

Symptom: Device will reply wrong packet under ENET ENCAP + IES1000 combination.

Condition: One PC and two devices with ENET ENCAP are connected to IES1000.

After PC ping device 1 and power-off device 1, PC pinging device 1 again will get reply from device 2.

#### 3. [BUG FIXED]

Symptom: Error ARP reply under 2 remote nodes. One is routing mode, and the other is bridge mode.

Condition: Device is set 2 remote nodes. The 1st remote node is routing mode, and the 2nd is bridge mode. When device recieves ARP request from the 1st remote node, it will reply it from 2nd remote node. This problem makes the remote VLAN enabled router confused and the communication will fail.

#### Modifications in V 3.40(PE.4)C0| 06/18/2004

1. Change to FCS version

#### Modifications in V 3.40(PE.4)b2| 06/15/2004

# 1. [Enhancement]

Enhance accuracy of Feature "AUTO\_MODIFY\_PRODUCTNAME" which will automatically determine its product name: either P660HW-61 or P660H-61.

#### 2. [Bug Fixed]

Symptom: Web GUI and SMT setting in firewall are inconsistent on all release before (PE.4)b1, including (PE.4)b1.

Condition: Previous release were based on old WEB GUI

#### 3. [Bug Fixed]

Symptom: QoS criteria violation.

Do not comply with the rule: Priority<sub>(CBR)</sub> > Priority<sub>(VBR)</sub> > Priority<sub>(UBR)</sub>

Condition: When being loaded traffic beyond line rate, the remote node traffic configured in CBR doesn't maintain its rate which is achievable. Rather, CBR traffic could be worse than VBR traffic. It is because the system sets Priority<sub>(CBR)</sub> = Priority<sub>(VBR)</sub>.

# Modifications in V 3.40(PE.4)b1 | 06/03/2004

1. Change TI datapump to TI AR7 03.00.09.00

# Modifications in V 3.40(PE.3)c0 | 05/24/2004

1. Change to FCS version.

# Modifications in V 3.40(PE.3)b3 | 05/18/2004

1. [ENHANCEMENT]

Enhance zero configuration web pages.

#### 2. [BUG FIXED]

Symptom: If you set right accounting server, password and enable it, when turn on/off authentication server or accounting server then system possible occurs reset

Condition: This is because when smt23-2 changing setting, system would send out accounting off packet to server and then create a timer to wait ack in 5 seconds period. Once receiving ack off system would delete parameter entry\_p. In this time the "timer needs be stop" or after next 5 seconds the parameter entry\_p would cause double free problem, then system reset.

#### 3. [BUG FIXED]

Symptom: 802.1x with dynamic WEP key cannot work when shared secret of accounting server is invalid

Condition: 1. Enable smt23.2 authenticatior server and acctounting server.

- 2. 802.1x supplicant associate to AP with mode 802.1x dynamic wep.
- 3. Modify smt23.2 acctounting server shared secret with a wrong value.
- 4. 802.1x supplicat was prohibited by 802.1x module.

#### 4. [BUG FIXED]

Symptom: SPT would show redundant error message "set TKIP key error" in Authentication required WPA mode if WPA broadcast key update Timer expired when wlan is not active

Condition: Because wlan is not active so wlan chip is not initialized. In this time if setkeymapping() still set key into chip, it is natually generate set key error.

#### 5. [BUG FIXED]

Symptom: Manually change current hour and press "Save" button, the saved value is

wrong.

Condition: Using Web to setting current hour then to save it.

#### 6. [BUG FIXED]

Symptom: Use ROM-d to put default ROM file will get malloc fail even available

memory size is still large than RAS size.

Condition: Use FTP BUFFER SIZE to alloc memory, instead of allocate the size of

flash.

# Modifications in V 3.40(PE.3)b2 | 05/12/2004

#### 1. [BUG FIXED]

Symptom: Apple Power book can't get IP when enable AnyIP..

Condition: Ask IP behavior in Apple is different with PC. Router would misunderstand Apple wants to ask IP or do any IP. We add a condition for Apple which don't run any IP.

#### 2. [BUG FIXED]

Symptom: ATM UBR, VBR can't work.

Condition: Fixed. Add VBR configuration at SAR channel setup.

#### 3. [BUG FIXED]

Symptom: Using 802.1X + dynamic WEP key under WPA mixed mode, it will ping timeout after re-authentication.

Condition: In SMT 23.4, Setting 802.1x and Dynamic WEP key and setting the Re-authentication Timer as 60 secs---after the Client re-authentication, then the ping data from LAN to WAN will "timed out".

#### 4. [BUG FIXED]

Symptom: Using WPA-PSK must enable RADIUS server.

Condition: Already fixed. Setting conflict problem.

#### 5. [BUG FIXED]

Symptom: Upload firmware from TFTP, FTP or eWC failed when DSL is link up.

Condition: Fixed.

# Modifications in V 3.40(PE.3)b1 | 04/26/2004

#### 7. [ENHANCEMENT]

Add feature: bandwidth management, zero configuration (include: any ip, auto-hunting,

web-redirect), firmware re-download mechanism in boot extension.

# 8. [ENHANCEMENT]

Add new firmware upgrade mechanism via FTP/TFTP/WEB in RAS.

# Modifications in V 3.40(PE.2)c0 | 04/09/2004

1. Change to FCS version

# Modifications in V 3.40(PE.1)c0 | 03/03/2004

2. Change to FCS version

WAN Related Command Home

	WA	N Related Command	1	<u>nome</u>
	Command		nand	Description
wan	adsl	bert		ADSL ber
		chandata		ADSL channel data, line rate
		close		Close ADSL line
		coding		ADSL standard current
		ctrleint		ADSL CTRLE response command
		defbitmap		ADSL defect bitmap status
		dyinggasp		Send ADSL dyinggasp
		fwav		Test the ADSL F/W available ping
		fwdl		Download modem code, but must reset first
		linedata		
			near	Show ADSL near end noise margin
			far	Show ADSL far end noise margin
		open		Open ADSL line
		opencmd		Open ADSL line with specific standard
		opmode		Show the operational mode
		perfdata		Show performance information, CRC, FEC, error
		F		seconds
		rdata	[start] [length]	Read DSP CTRLE registers 512 bytes
		reset	[	Reset ADSL modem, and must reload the modem
				code again
		selftest		
			long	ADSL long loop test
			short	ADSL short loop test
		status	SHOTE	ADSL status (ex: up, down or wait for init)
		version		ADSL version information
		vendorid		ADSL vendor information
		utopia		Show ADSL utopia information
		cellent		Show ADSL attopia information  Show ADSL cell counter
		display		Show ADSE cen counter
		display	shutdown	Show the counter of rate adaptive mechanism
			Silutdowii	happening
			rataun	Show real status that rate adaptive mechanism
			rateup	happened
		rateadap	[on off]	Turn on/off rate adaptive mechanism
		dumpcondition	[on off]	Turn on/off online debug information of rate
		dumpcondition		adaptive mechanism
		sampletime	[mins]	Tune the sample time of rate adaptive mechanism
	1	-		
		noisegt	[dB]	if noise margin is 3db greater than before, and rate is worse than before, then system will do "L1"
				shutdown RA3", default is 3db
-	1	noisemerain	[dB]	if noise margin is greater than this value, and rate
		noisemargin	լաս	
				is worse than before, then system will do "L1 shutdown RA3", default is 8db
-	1	norgistimo	[tima]	when the adaptive condition is matched system
		persisttime	[time]	will continue to monitor the time period
				"persisttime" before doing "L1 shutdown RA3", default is 30 seconds
	1	timeinterval	[minc]	when "L1 shutdown RA3" is done twice, and still
		umemiervar	[mins]	can't reach the max rate which system recorded,
				it will delay a time period that the period base
				time is"timeinterval" before starting again. The
	1			time is unlemeral before starting again. The

			time-based default is 2 hrs
	defectcheck	[on off]	Turn on/off detect table checking, default is on
	txgain	[value]	Set the CTRLE register (0xc3), the value is from
			0xfa to 0x06
	targetnoise	[value]	Set the CTRLE register (0xc4), the value is from
			0xfa to 0x06
	maxtonelimit	[value]	Set the CTRLE register (0xc5), the value is from
			0xfa to 0x06
	rxgain	[value]	Set the CTRLE register (0xc6), the value is from
			0xfa to 0x06
	txoutputpwr	[value]	Set the CTRLE register (0xc7), the value is from
			0xfa to 0x06
	rxoutputpwr	[value]	Set the CTRLE register (0xc8), the value is from
			0xfa to 0x06
	maxoutputpwr	[value]	Set the CTRLE register (0xc9), the value is from
			0xfa to 0x06
	errorsecond		
		sendes	Send current error second information
			immediately
	dygasprecover		
	dygasprecover	level [value]	By default is 100, after receiving 100 dying gasp
			system will reboot
	dygasprecover	active [on off]	Turn on/off this mechanism
	rsploss	[1 0]	Turn on means to response signal loss of CTRLE
			immediately, default is off
atm	test	[fix rand period oam loopback]	Generate ATM traffic
hwsar	disp		Display hwsar packets incoming/outgoing
			information
	clear		Clear hwsar packets information

	WLAN	Related Comman	nd	<u>Home</u>	
		Co	mmand	Description	
Wlan					
	active	[on off]	[0 1]	Turn on/off wireless lan	
	association			Show association list	
	load			Load WLAN configuration into buffer.	
	Display			Display WLAN configuration data.	
	chid			Configure channel ID	
	essid			Configure ESSID	
	hiddenssid		[on/off]	Enable/Disable hidden SSID	
	threshold				
		rts	<rts threshold="" value=""></rts>	Set threshold rts value	
		Fragment	<pre><fragment threshold="" value=""></fragment></pre>	Set threshold fragmentation value	
	wep				
		type	<none 64 128 256></none 64 128 256>	Set WEP key to 64, 128 or 256 bits.	
		Key	Set <set> <value></value></set>	Set WEP key value per set	
		Key	Default <set></set>	Set WEP default key set	
	macfilter				
		Enable		Enable macfilter	
		Disable		Disable macfilter	
		Action	<allow deny></allow deny>	When action match, allow or deny this mac	
		Set	<set#> <mac address=""></mac></set#>	Set mac address by set	
	Clear			Clear all WLAN configuration data.	

Save			Save WLAN configuration working buffer to Rom file.
Power		[1:19dbm, 2:18dbm, 3:16dbm, 4:15dbm, 5:14dbm]	Change TX power level.
reset			Reset WLAN
filter			
	[incoming   outgoing]	<pre><generic>[set#1][set#2][set#3][set#4]</generic></pre>	To set generic filter for wireless channel
fildisp			Display wireless filter setting
1130cmd			Internal usage.
	restart stat		Show WLAN restart statistics
	chg_dot11mod		Set WLAN state to mix mode, B only or G only
	e		
	show_rxDesc		Show number of Rx host descriptors
	acxstat		Show acx run time statistics

IP Related Command Home

	Command		nd	Description
ip				•
	address		[addr]	display host ip address
	loopbackaddr		<ip1> [IP2]</ip1>	Set loopback address.
	alias		<iface></iface>	alias iface
	aliasdis		<0 1>	disable alias
	arp			
		status	<iface></iface>	display ip arp status
		add	<hostid> ether <ether addr=""></ether></hostid>	add arp information
		resolve	<hostid></hostid>	resolve ip-addr
		drop	<hostid> [hardware]</hostid>	drop arp
		flush		flush arp table
		publish		add proxy arp
	dhcp		<iface></iface>	
		client		
			release	release DHCP client IP
			renew	renew DHCP client IP
		mode	<pre><server relay none client></server relay none client></pre>	set dhcp mode
		relay	server <serverip></serverip>	set dicp relay server ip-addr
		reset		reset dhcp table
		server		
			probecount <num></num>	set dhcp probe count
			dnsserver <ip1> [IP2] [IP3]</ip1>	set dns server ip-addr
			winsserver <winsip1> [<winsip2>]</winsip2></winsip1>	set wins server ip-addr
			gateway <gatewayip></gatewayip>	set gateway
			hostname <hostname></hostname>	set hostname
			initialize	fills in DHCP parameters and initializes (for
				PWC purposes)
			leasetime <period></period>	set dhcp leasetime
			netmask <netmask></netmask>	set dhcp netmask
			pool <startip> <numip></numip></startip>	set dhep ip pool
			renewaltime <period></period>	set dhcp renew time
			rebindtime <period></period>	set dhep rebind time
			reset	reset dhcp table
			server <serverip></serverip>	set dhcp server ip for relay
			dnsorder [router isp]	set dhep dns order

	status	[option]	show dhep status	
	static	[option]	show thep status	
	Static	delete <num> all</num>	delete static dhep mae table	
		display	display static dhep mae table	
		update <num> <mac> <ip></ip></mac></num>	update static dhep mae table

		edit forwardip [ip]	set nat server server ip	
		edit protocol [protocol id]	set nat server protocol	
	service			
		irc [on off]	turn on/off irc flag	
		sip active <1/0> (enable/disable)	Enable/disable SIP ALG	
	resetport		reset all nat server table entries	
	incikeport	[on off]	turn on/off increase ike port flag	

PPP Related Command Home

		~		
		Con	Description	
ppp	p			
	autotrigger			
		on	<remotenodeindex></remotenodeindex>	turn on packet trigger, default is enable
		off	<remotenodeindex></remotenodeindex>	turn off packet trigger
		status		show autotrigger status
	retrv		<interval></interval>	adjust PPP retrial interval

Bridge Related Command <u>Home</u>

	Co	ommand	Description
bridge			
mode		<1/0> (enable/disable)	turn on/off (1/0) LAN promiscious mode
blt			related to bridge local table
	disp	<channel></channel>	display blt data
	reset	<channel></channel>	reset blt data
	traffic		display local LAN traffic table
	monitor	[on off]	turn on/off traffice monotor. Default is off.
	time	<sec></sec>	set blt re-init interval
brt			related to bridge route table
	disp	[id]	display brt data
	reset	[id]	reset brt data
cnt			related to bridge routing statistic table
	disp		display bridge route counter
	clear		clear bridge route counter
stat			related to bridge packet statistic table
	disp		display bridge route packet counter
	clear		clear bridge route packet counter
disp			display bridge source table

Radius Related Command <u>Home</u>

Command				Description
radius				
	auth			show current radius authentication server configuration
	acco			show current radius accounting server configuration

8021x Related Command Home

		Comm	Description	
8021x				
	debug	level	[debug level]	set ieee802.1x debug message level
		trace		show all supplications in the supplication table
		user	[username]	show the specified user status in the supplicant
				table

Configuration Related Command <u>Home</u>

Command					Description	
config					The parameters of config are listed below.	
edit	firewall	active			Activate or deactivate the saved firewall se	ettings

340PE10C0.doc 32/42

		<yes no></yes no>		
retrieve	firewall			Retrieve current saved firewall settings
save	firewall			Save the current firewall settings
display	firewall			Displays all the firewall settings
		set <set#></set#>		Display current entries of a set configuration;
				including timeout values, name, default-permit,
				and number of rules in the set.
		set <set#></set#>	rule <rule#></rule#>	Display current entries of a rule in a set.
		attack		Display all the attack alert settings in PNC
		e-mail		Display all the e-mail settings in PNC
		?		Display all the available sub commands
		e-mail	mail-server	Edit the mail server IP to send the alert
			<mail ip="" server=""></mail>	
			return-addr	Edit the mail address for returning an email alert
			<e-mail address=""></e-mail>	
			e-mail-to <e-mail< td=""><td>Edit the mail address to send the alert</td></e-mail<>	Edit the mail address to send the alert
			address>	
			policy <full td=""  <=""><td>Edit email schedule when log is full or per hour,</td></full>	Edit email schedule when log is full or per hour,
			hourly  daily	day, week.
			weekly>	
			day <sunday td=""  <=""><td>Edit the day to send the log when the email policy</td></sunday>	Edit the day to send the log when the email policy
			monday   tuesday	is set to Weekly
			wednesday	, and the second
			thursday   friday	
			saturday>	
			hour <0~23>	Edit the hour to send the log when the email
				policy is set to daily or weekly
			minute <0~59>	Edit the minute to send to log when the email
				policy is set to daily or weekly
			Subject <mail< td=""><td>Edit the email subject</td></mail<>	Edit the email subject
			subject>	·
		attack	send-alert	Activate or deactivate the firewall DoS attacks
			<yes no></yes no>	notification emails
			block <yes no></yes no>	Yes: Block the traffic when exceeds the
				tcp-max-incomplete threshold
				No: Delete the oldest half-open session when
				exceeds the tcp-max-incomplete threshold
			block-minute	Only valid when sets 'Block' to yes. The unit is
			<0~255>	minute
			minute-high	The threshold to start to delete the old half-opened
			<0~255>	sessions to minute-low
			minute-low	The threshold to stop deleting the old half-opened
			<0~255>	session
			max-incomplete-	The threshold to start to delete the old half-opened
			high <0~255>	sessions to max-incomplete-low
			max-incomplete-	The threshold to stop deleting the half-opened
			low <0~255>	session
			tcp-max-incompl	The threshold to start executing the block field
			ete <0~255>	
		set <set#></set#>	name <desired< td=""><td>Edit the name for a set</td></desired<>	Edit the name for a set
			name>	
			default-permit	Edit whether a packet is dropped or allowed when
			<forward block></forward block>	it does not match the default set
			icmp-timeout	Edit the timeout for an idle ICMP session before it
			<seconds></seconds>	is terminated

udp-idle-timeout		Edit the timeout for an idle UDP session before it
<pre><seconds></seconds></pre>		is terminated
connection-timeo		Edit the wait time for the SYN TCP sessions
ut <seconds></seconds>		before it is terminated
fin-wait-timeout		Edit the wait time for FIN in concluding a TCP
<seconds></seconds>		session before it is terminated
tcp-idle-timeout		Edit the timeout for an idle TCP session before it
<seconds></seconds>		is terminated
pnc <yes no></yes no>		PNC is allowed when 'yes' is set even there is a
part years		rule to block PNC
log <yes no></yes no>		Switch on/off sending the log for matching the
		default permit
rule <rule#></rule#>	permit	Edit whether a packet is dropped or allowed when
	<forward block></forward block>	it matches this rule
	active <yes no></yes no>	Edit whether a rule is enabled or not
	protocol <0~255>	Edit the protocol number for a rule. 1=ICMP,
		6=TCP, 17=UDP
	log	Sending a log for a rule when the packet
	<none match not-matc< td=""><td>none matches not match both the rule</td></none match not-matc<>	none matches not match both the rule
	h both>	
	alert <yes no></yes no>	Activate or deactivate the notification when a DoS
		attack occurs or there is a violation of any alert
		settings. In case of such instances, the function
		will send an email to the SMTP destination
		address and log an alert.
	srcaddr-single <ip< td=""><td>Select and edit a source address of a packet which</td></ip<>	Select and edit a source address of a packet which
	address>	complies to this rule
	srcaddr-subnet <ip< td=""><td>Select and edit a source address and subnet mask</td></ip<>	Select and edit a source address and subnet mask
	address> <subnet< td=""><td>if a packet which complies to this rule.</td></subnet<>	if a packet which complies to this rule.
	mask>	
	srcaddr-range <start ip<="" td=""><td>Select and edit a source address range of a packet</td></start>	Select and edit a source address range of a packet
	address> <end address="" ip=""></end>	which complies to this rule.
		Calcat and adit a destination address of a masket
	destaddr-single <ip address&gt;</ip 	Select and edit a destination address of a packet which complies to this rule
	destaddr-subnet <ip< td=""><td>Select and edit a destination address and subnet</td></ip<>	Select and edit a destination address and subnet
	address> < subnet	mask if a packet which complies to this rule.
	mask>	mask if a packet which complies to this fulc.
	destaddr-range <start< td=""><td>Select and edit a destination address range of a</td></start<>	Select and edit a destination address range of a
	ip address> <end ip<="" td=""><td>packet which complies to this rule.</td></end>	packet which complies to this rule.
	address>	packet which complies to this rule.
	tcp destport-single	Select and edit the destination port of a packet
	<pre><port#></port#></pre>	which comply to this rule. For non-consecutive
	1	port numbers, the user may repeat this command
		line to enter the multiple port numbers.
	tcp destport-range	Select and edit a destination port range of a packet
	<start port#=""> <end< td=""><td>which comply to this rule.</td></end<></start>	which comply to this rule.
	port#>	
	udp destport-single	Select and edit the destination port of a packet
	<pre><port#></port#></pre>	which comply to this rule. For non-consecutive
		port numbers, users may repeat this command line
		to enter the multiple port numbers.
	udp destport-range	Select and edit a destination port range of a packet
	<start port#=""> <end< td=""><td>which comply to this rule.</td></end<></start>	which comply to this rule.
	port#>	

				desport-custom <desired custom="" name="" port=""></desired>	Type in the desired custom port name
delete	firewall	e-mail			Remove all email alert settings
		attack			Reset all alert settings to defaults
		set <set#></set#>			Remove a specified set from the firewall configuration
		set <set#></set#>	rule <rule#></rule#>		Remove a specified rule in a set from the firewall configuration
insert	firewall	e-mail			Insert email alert settings
		attack			Insert attack alert settings
		set <set#></set#>			Insert a specified rule set to the firewall configuration
		set <set#></set#>	rule <rule#></rule#>		Insert a specified rule in a set to the firewall configuration
cli					Display the choices of command list.

				lan/wan/dmz/wlan	
-					

SMT Related command

<u>Home</u>

No	Command	Description	Comment
	sys bridge [on off]	Set system bridge on/off	Menu 1
	sys routeip [on off]	Set system IP routing on/off	Menu 1
	sys hostname [hostname]	Set system name	Menu 1
	sys display	Display hostname, routing/bridge mode information in menu 1	Display Menu 1
	sys default	Load All Default Settings Except LAN and DHCP.	

	Save all the parameters which will include menu1, menu 3.2			
	LAN, menu 4 or menu 11 WAN, menu 12 static route, menu			
sys save	15 NAT server set, menu 21 filter sets, menu 22 SNMP,			
	menu 24.11 remote management and 3.5 Wireless LAN			
wan backup mechanism [dsl   icmp]	Set wan backup mechanism to DSL link or ICMP	Menu 2		
wan backup addr [index] [IP addr]	Set wan ip address <index></index>	Menu 2		
wan backup tolerance [number]	Set keepalive fail tolerance	Menu 2		
wan backup recovery [interval(sec)]	Set recovery interval	Menu 2		
wan backup timeout [number]	Set ICMP timeout	Menu 2		
wan backup save	Save wan backup related parameters	Menu 2		
wan backup display	Display wan backup configurations	Menu 2		
wan tredir active [on off]	Set traffic redirect on/off	Menu 2.1		
wan tredir ip [IP addr]	Set traffic redirect gateway IP address	Menu 2.1		
wan tredir metric [number]	Set traffic redirect metric	Menu 2.1		
wan tredir save	Save traffic redirect related parameters	Menu 2.1		
wan treun save	** Have to apply "wan backup save" command thereafter			
wan tredir display	Display traffic redirect configurations	Menu 2.1		
lan index [1 2 3]		Menu 3.2		
1: Select main LAN Interface	Select a LAN interface to edit			
2: Select IP Alias 1	Solotta El IV Interiaco to care			
3: Select IP Alias 2				
lan active [on off]	Turn on or off on IP Alias Interface	Menu 3.2.1		
	Set LAN IP address and subnet mask	Menu 3.2		
lan ipaddr [address] [subnet mask]	Example:			
	lan ipaddr 192.168.1.1 255.255.255.0			
lan rip [none in out both] [rip1 rip2b rip2m]	Set LAN IP RIP mode and RIP version, if you choose none in	Menu 3.2		
	the first parameter, the second parameter is also necessary	16.00		
lan multicast [none igmpv1 igmpv2]	Set LAN IP multicast mode	Menu 3.2		
1 61 5 1 4 1 3 5 1 4 1 3	Set LAN filter to be incoming/outgoing or protocol /device	Menu 3.1		
lan filter [incoming outgoing] [tcpip generic]	and the filter set could be 1-12, 0 means empty			
[set#1] [set#2] [set#3] [set#4]	Example:			
1 11 1 1 1 1 1 1	Lan filter incoming topip 1 0 0 0	) ( 2 2 2		
lan dhep mode [server relay none]	Set DHCP mode to be"server", "relay", "none"	Menu 3.2		
lan dhcp server dnsserver [pri dns] [sec dns]	Set primary and secondary LAN DNS server	Menu 3.2		
lan dhcp server pool [start-address] [num]	Set DHCP start address and pool size	Menu 3.2		
lan dhep server gateway [IP address]	Set DHCP gateway	Menu 3.2		
lan dhep server netmask [subnet mask]	Set DHCP subnet mask	Menu 3.2		
lan dhep server leasetime [second]	Set DHCP lease time	Menu 3.2		
lan dhep server renewaltime [second]	Set DHCP renew time	Menu 3.2		
lan dhep server rebindtime [second]	Set DHCP rebind time	Menu 3.2		
lan dhcp relay server [IP address]	Set IP address of DHCP relay server	Menu 3.2		
lan display	Display LAN or IP alias parameters	Display Menu 3		
lan clear	Clear the Working Buffer			
lan save	Save LAN related parameters			
	Guid and Land don't are a second as a seco	M 11 1		
	Set the node pointer to specific wan profile. If you want to set	Ivienu 11.1		
	WAN profile, please use this command first, system will use			
wan node index [1-8]	the index number for pointing to specific PVC (remote node),			
	and for consequent commands reference, if index = 1 means			
	it's ISP node	Mana 11 1		
wan node clear	Clear the parameters of the temporary WAN profile	Menu 11.1		
wan node ispname [ISP name]	Enable the name of wan node	Menu 11.1		

	I	
wan node enable	Enable the wan profile	Menu 11.1
wan node disable	Disable the wan profile	Menu 11.1
wan node encap [1483 pppoa pppoe enet]	Set the wan protocol	Menu 11.1
wan node mux [vc llc]	Set the wan multiplex	Menu 11.1
wan node ppp authen [chap pap both]	Set PPP authentication type	Menu 11.1
wan node ppp username [name]	Set PPP username	Menu 11.1
wan node ppp password [password]	Set PPP password	Menu 11.1
wan node service [name]	Set PPPoE service name	Menu 11.1
wan node bridge [on off]	Set the wan bridge mode	Menu 11.1
wan node routeip [on off]	Set the wan IP routing mode	Menu 11.1
wan node callsch [set1#][set2#][set3#][set4#]	Set call schedule set, set number 0 means empty	Menu 11.1
wan node nailedup [on off]	Set nailed up connection on/off	Menu 11.1
wan node vpi [num]	Set the wan vpi. Range: 0~255	Menu 11.6
wan node vci [num]	Set the wan vci. Range: 32~65535	Menu 11.6
wan node qos[ubr cbr]	Set the wan QOS type to be UBR or CBR	Menu 11.6
wan node per [num]	Set the wan PCR value	Menu 11.6
wan node scr [num]	Set the wan SCR value	Menu 11.6
wan node mbs [num]	Set the wan MBS value	Menu 11.6
wan node wanip [static dynamic] [address]	Set the wan IP address	Menu 11.3
wan node remoteip [address] [subnet mask]	Set the remote gateway IP address and subnet mask	Menu 11.3
wan node nat [off   sua   full] [address		Menu 11.3
mapping #]	Set type wan NAT mode to be off or SUA or Full feature	
wan node rip [none in out both] [rip1 rip2b rip2m]	Set the wan RIP mode and RIP version	Menu 11.3
wan node multicast [none igmpv1 igmpv2]	Set the wan IP multicast mode	Menu 11.3
wan node filter [incoming outgoing] [tcpip generic] [set #1] [set #2] [set #4]	Set WAN filter, incoming or outgoing can be specified, and filter set can be 1-12, value 0 means empty	Menu 11.5
[set #1] [set #2] [set #3] [set #4]	Constitution of the Carlot of	
wan node save	Save the related parameters of WAN node	D'1. M 11
wan node display	Display WAN profile configuration in buffer	Display Menu 11
' (11'1. [D. 1. //]	Colore Codic Description 1 16 to 12	M 12.1
